## DETAILED ACTION

This Office Action is in response to the amendment filed 14 October 2005.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-8,10 and 21-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Fujihira (DE 19824514).

Fujihira discloses a diode (Fig. 19) that contains a first layer (1) of semiconductor material of a first layer conductivity type with first and second sides where the first layer is formed of arsenic, a second layer (2) of semiconductor material of a second conductivity type having first and second sides with the first side of the first layer adjacent the second side of the second side, a single current localization region (18) positioned in the first layer of semiconductor material and in the second layer and adjacent to the first side of the first layer and extending beyond the first side of the first layer into the second layer, the first and second conductivity are the same conductivity N, the second layer varies in width, such that a central portion of the second layer is thinner than sides of the second layer

Art Unit: 2822

A third layer (3) of semiconductor material of a third conductivity type having first and second sides where the first side is adjacent the second side of the second layer, wherein the distance in a central portion of the device from the current localization region to the third layer is less than a distance from the first layer to the third layer at the edge of the device.

The current localization region dopant diffuses faster than the first dopant layer since the first dopant layer is arsenic and the current localization layer is phosphorus and the first dopant layer can also be phosphorus

#### ***Allowable Subject Matter***

Claim 9 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### ***Response to Arguments***

Applicant's arguments with respect to claims 1-10 and 21-26 have been considered but are moot in view of the new ground(s) of rejection.

#### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

Art Unit: 2822

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
